JOB MARKET PAPER

Hegemonic Competition with Carrots and Sticks (PDF)
(with Nicolas Wessler)

Hegemonic powers use economic tools to influence the geopolitical alignment of third countries. We develop a model in which two competing hegemons use direct payments (*carrots*) and economic threats (*sticks*) to influence third countries. Guided by the model, we measure carrots and sticks using historical data from the Cold War. We use our measures to estimate the effects of carrots and sticks on geopolitical alignment empirically. These tools create political alignment, but are expensive. We combine the model with the empirical estimates to compute the geopolitical return on foreign aid and evaluate the consequences of the USAID shutdown for the modern U.S–China competition.
